Report of Bacteriological Examination of Water Sample

Samples collected by - Bob Carson (Unofficial)
Date of collection - May 26, 1983
Place - 3304 West Cardinal; Springfield, MO.
Owner of water supply -
Date analyzed - May 26, 1983

Lab No.	Source of Sample	Fecal coliform per 100 ml. (MF)	Coliform per 100 ml. (MF)	Nitrate Nitrogen ppm	Other
622	surface water	<10			

The above examinations were made by the City of Springfield, Department of Public Health Laboratory in accordance with the latest edition of Standard Methods of Water Analysis of the American Public Health Association. At the time this examination was made, the sample _____ the limits acceptable for drinking purposes.

The safety of a water supply depends upon proper construction and protection against contamination. A favorable bacteriological analysis alone should not be accepted as conclusive evidence of the safety of a water supply unless a survey of the supply indicates no sanitary defects. It is recommended that a water supply used for drinking purposes be analyzed routinely.
